GARMONT® developed the a.d.d.® (Anatomically Directed Design) technology from an in-depth study of the foot.

The foot is a complex anatomical structure designed to support the body's weight, absorb impact and provide stability and mobility during movement.

With its combination of bones, muscles, tendons and ligaments, the foot plays an essential role in locomotion and balance.

Proper biomechanical function is essential to prevent injuries and improve performance, especially in outdoor and sports activities. Shoes designed with anatomical and technological features can enhance stability, comfort and more efficient movement, reducing fatigue and the risk of injury.

This innovative approach integrates five design elements that, depending on the model, work in synergy to offer stability, comfort and technicity.

1) ANATOMICAL TONGUE

The tongue matches the asymmetric shape of the top of your foot and ankle. It is thicker to the outside and progressively thinner toward the inside. This anatomic shape keeps the tongue in place resulting in better control, stability and comfort.

2) PRECISION LACING

The shoe flexes like your foot for out-of-the-box walking comfort.

4) ASYMMETRICAL CUFF

The ankle cuff is lower on the outside and taller on the inside for better edging, greater overall stability and comfort when traversing and scrambling.

- Technicity
- Stability
- Comfort

3) DIFFERENTIAL ANKLE PADS

Securely locks the heel in place for a precise fit around the ankle bones for better stability and support.

5) ROOMY TOE BOX

Features a straighter shape to accommodate the natural position of the big toe. With this design your toes can provide better balance and propulsion.

COMFORT AND PERFORMANCE FOR WOMEN

The development of GARMONT® footwear has a clear objective: to offer maximum comfort and the best possible performance. For this reason, we have created a specific fit for women, adapting the last and the lasting board to suit the different needs of each model.

EMF ERGONOMIC WOMEN'S FIT

The male and female foot have specific anatomical and biomechanical differences. Generally, the female foot is smaller, with a slimmer structure and more tapered toes.

The sole is often narrower and the arch of the foot more pronounced.

In addition, the muscles of the female foot are less dense, while the joints are more flexible.

Women also tend to walk with a shorter stride, distributing their weight more on the front part of the foot.

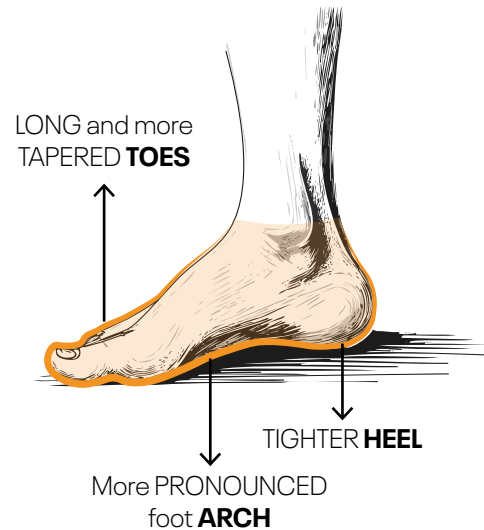

Aware of these peculiarities, we have set up a dedicated research area to ensure that our footwear best meets the needs of every foot.

LASTING BOARD

LESS STIFF than MEN'S **insole board**

DEDICATED WOMEN'S LAST

GARMONT® partners with Vibram® to offer the best technologies in terms of grip, traction and durability. Through this collaboration, GARMONT® footwear features outsoles with advanced compounds such as Mont, Megagrip, XS Trek EVO and Durastep.

Innovative technologies such as Vibram® Traction Lug enhance stability across all types of terrain, while Vibram® Litebase reduces sole weight by 30% thanks to a 50% reduction in thickness without compromising performance.

REBOOT YOUR BOOTS

Worn-out soles on select Garmont boots can be replaced through over three hundred authorized Vibram cobblers across Europe to give the boots a second life.

GARMONT TRACTION FORMULA

GTF – Garmont Traction Formula is a proprietary family of outsoles designed with compounds and tread patterns tailored to specific outdoor activities. From long distance treks to versatile day hikes or fast-paced approaches, every outsole is engineered to deliver the optimal balance of grip, durability and stability.

Each outsole design is carefully studied to provide confidence and control on its intended terrain, ensuring that every adventure is met with the performance and reliability it demands.

The long-standing collaboration between GARMONT® and JV International, who design, develop and produce Soles by Michelin®, has led to the design of high-performance customised soles that deliver exceptional grip, sustainability and lightness for all activities.

These high performance soles provide excellent traction, lightness and flexibility.

The strategic lug pattern enhances grip and stability on various surfaces while siping improves adherence by adapting to terrain irregularities. Optimised lug distribution reduces weight, maintains flexibility and maximises traction.

ergoLAST

The contours of this anatomical last are smooth and rounded, to more closely follow the shape of the human foot. Footwear built on this last wrap the foot better, especially the heel and bottom of the foot, for a more comfortable, ergonomic fit.

HEEL LOCK

The GARMONT® Heel Lock system provides a secure, locked-in fit, keeping your foot firmly in place to prevent unwanted movement. By eliminating heel slippage, it minimizes friction, reducing the risk of blisters and enhancing overall comfort. This innovative design ensures better stability and support, allowing you to focus on your adventure without discomfort or distractions.

G-WRAP

G-Wrap technology is integrated between the upper and lining in the forefoot area and functions through the lacing system. Tightening the laces applies tension on the G-Wrap structure, which will tend to wrap around the foot giving an immediate feeling of stability and security.

INSTEP LOCK

A flap system that can be adjusted through the BOA® Fit System to dynamically adapt the tension on the front of the foot and keep the foot stable at every stage of the ascent.

The BOA® Fit System delivers a micro-adjustable, precision fit engineered to perform in the toughest conditions.

G_DRY

The G-DRY membrane guarantees a windproof barrier with up to 10.000mm waterproof protection.

Depending on the level of protection required for each activity, GARMONT® uses a variety of GORE-TEX® waterproof membrane options: Insulated Comfort, Performance Comfort, Extended Comfort.

All Garmont products that feature Gore-Tex adopt the ePE membrane solution. This innovative membrane is a major step forward in the development of high-performance yet responsible products.

It is lightweight, thin yet strong and provides waterproof, windproof, breathable and durable protection. Through lamination to carefully selected fabrics, a PFAS-free material with a reduced carbon footprint is achieved.

Arneplant® footbeds offer superior comfort and cushioning. Utilising Arneflex™ technology with open-cell PU foam, they ensure breathability, moisture absorption and lightness.

Antibacterial components eliminate heat and odor. The footbed combines two types of foam for optimal sole and arch support, along with D3O® inserts for impact protection.

Ortholite®

Ortholite® designs and produces custom footbed solutions that deliver unrivaled comfort and performance.

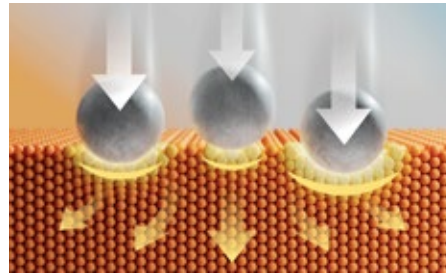

D3O® Protected

D3O® is the world's leading protection company. It produces an extremely innovative orange material that keeps you and your things safe from harm caused by impact, vibration and fatigue.

This revolutionary material is characterized by its exceptional softness and flexibility. Its unique structure allows it to effectively absorb and dissipate impact energy, then return perfectly to its original shape.

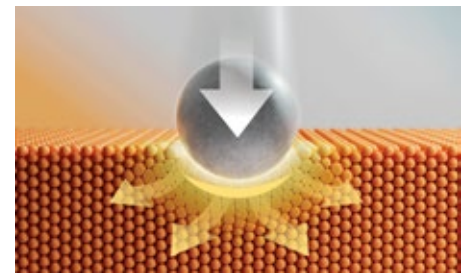

This characteristic makes it ideal for applications requiring superior protection and comfort.

GARMONT® is one of the first to apply this material to outdoor footwear. Some models use this material in the footbed to provide superior protection for the foot. Its advanced cushioning mechanism guarantees an increased level of comfort. Other models use D3O® material in the ankle area for added protection in the event of external impacts.

Shock Absorption

Non-sacrificial smart material stiffens to absorb shock, minimize fatigue and increase comfort.

Impact Protection

Non-sacrificial smart material stiffens to dissipate high impact energies and mitigate injury/damage.

SUSTAINABILITY

At GARMONT®, we are aware that every action we take has an impact.

That's why we believe in the importance of scientifically and transparently measuring this impact through Life Cycle Assessment, identifying critical areas and intervening where necessary.

Accurate analysis allows us to adopt targeted solutions to progressively reduce our footprint and contribute to a more sustainable future.

We have initiated the first phase of this analysis to gain a deeper understanding of our impact, identify areas for improvement and develop concrete strategies to address them. Once validated, we will share the results transparently, as we believe that change comes through collective awareness and commitment.

GARMONT: EVOLVING TRADITION

We are the sum of our experiences and those of our predecessors. As we look to the future, we draw strength from our past, transforming heritage into innovation. Today, GARMONT® continues to evolve with solid roots grounded in over 60 years of experience, while embracing a world in constant transformation.

This evolution has given rise to two lines: Tradizione and 9.81, a perfect synthesis of legacy and progress. Both share the same vision and DNA but are distinct in form and function. On the one hand, Tradizione embodies timeless design and highly technical lasts, with products designed for lovers of classic mountain pursuits; on the other, 9.81 features products with a modern, dynamic design and a running-inspired fit, ideal for those who seek lightness, agility and versatility. Together, they represent another step forward to meet the needs of a growing and diverse public, embracing change and growing with it. As GARMONT® evolves, so does our vision of movement.

LEATHER SKI BOOT

1960

In 1964 the GARMONT brand is established in the sports district of Montebelluna. The name reflects its roots: 'GAR' comes from the surname of the founder, Garbuio, and 'MONT' from Montebelluna, the heart of the sports footwear tradition.

1970

GARMONT establishes itself as a leading brand in the world of ski mountaineering, winning over fans and professionals alike.

GARMONT G-RIDE

1990

The company expands its offering by introducing mountaineering footwear and launching an international expansion strategy.

DRAGONTAIL

Some of GARMONT's most iconic models are introduced, including DRAGONTAIL and 9.81.

2000

9.81 RACER

GARMONT chooses to focus its know-how on the growth of the Outdoor line, exiting the ski boot market to strengthen its positioning in key segments.

2010

TOWER EXTREME LX GTX®

In a post-pandemic world, GARMONT consolidates its presence on the outdoor market and embarks on a journey towards greater sustainability, measuring its impact and developing more eco-friendly products.

2020

9.81 ONYX GTX®

With the launch of the new Tradizione and 9.81 lines, the outdoor collection expands to meet evolving market demands and adapt to a changing world.

2026

9.81 MOUNTAIN IN MOTION

The outdoor world is changing. While mountains were once explored with traditional tools and a slower pace, today the rise of disciplines such as trail running has redefined our relationship with the natural environment. Speed, dynamism and performance go hand in hand with the traditional hiking experience, offering new perspectives and new challenges.

This evolution gave birth to the 9.81 collection, a line dedicated to this new approach to mountains and outdoor activities. Here, exploration gives way to athletic drive, the desire for pure movement and the personal challenge of pushing one's own limits. Technology, lightness and responsiveness become the pillars of a collection designed for those who experience nature with energy and determination.

The 9.81 line takes its name from the universally recognized acceleration due to gravity: 9.81 m/s^2 . This fundamental force is the unseen yet ever-present phenomenon that keeps us firmly anchored to the ground while simultaneously enabling every movement we make. Without it, there would be no traction beneath our feet, no resistance to push against, and no way to propel ourselves forward.

Gravity is more than just a physical constant - it is the silent force that underpins our every step, jump, and ascent. It is the driving energy that connects us to the ground, providing the necessary thrust as we run across rugged trails, climb towering heights, and push the boundaries of our own endurance. Whether we are sprinting at full speed, scaling rocky surfaces, or leaping toward new challenges, gravity is both our anchor and our ally, shaping the way we move and experience the world around us.

This essence of movement is what defines the 9.81 line, inspiring athletes, adventurers, and explorers to embrace the force that both grounds and propels them.

9.81 IS THE SPEED OF THE EARTH'S EMBRACE

Gravity, the universal force that shapes our world, accelerates us at 9.81 meters per second squared towards the ground.

The acceleration of gravity shifts our perspective during free fall. From the cold greys and blues of distant outer space to the vibrant hues of a living planet, as gravity takes hold, Earth's colors come to life.

This speed descent alters our viewpoint and defines our 9.81 colour journey.

9.81 IS THE BOND BETWEEN ACCELERATION AND CHANGES IN PERSPECTIVE.

9.81 COLOUR JOURNEY: A SPECTRUM OF COLOURS IN GRAVITATIONAL ACCELERATION FROM SPACE TO EARTH

THE ESSENCE OF TRADITION, THE EVOLUTION OF TECHNIQUE

The Tradizione line is where tradition meets innovation. Inspired by the rich legacy of mountaineering, this collection blends timeless design with modern performance. Every detail reflects our deep-rooted mountain heritage, elevated by cutting-edge materials and advanced technical solutions.

Defined by iconic features, clean silhouettes and a precise, snug fit, the Tradizione line is dedicated to those who live the mountains with passion and authenticity. Whether on a day hike, via ferrata, or multi-day treks, these products deliver comfort, reliability and the enduring beauty of classic design.
